# Customer case

## Alfa Laval Service Kits Decanters

An industrial customer did not consult Alfa Laval in terms of spare parts for a decanter.

Instead of ordering an Alfa Laval Service Kit Decanter, the customer purchased single non-OEM parts.

Consequently, not all required parts have been purchased and a design change in the decanter had not been taken into consideration.

Additional decanter standstill time was needed to obtain all correct required parts from Alfa Laval.

### Results

- Original Alfa Laval Service Kits used
- No production losses due to extended decanter standstill when doing decanter maintenance

POTENTIAL SAVINGS	VALUE	HOW
Daily production losses if downtime	€ 120,000	Original Alfa Laval Service kits for decanter
<b>Potential daily savings</b>	<b>€ 120,000</b>	<b>Alfa Laval Service Kits</b>

# Frequently asked questions

Alfa Laval Service Kits Decanters

- Why is it necessary to purchase a service kit when the original part specification is known?
  - Normally this is not the only part needed
  - If design changes have been made to this part, the service kit automatically includes the updated part

# Frequently asked questions

Alfa Laval Service Kits Decanters

- What does Alfa Laval need to ensure that the correct service kits are received?
  - Service kits are assorted according to the decanter serial number – in case of design changes, the correct kit is sent automatically
  - It is also useful if the amount of hours the decanter has been in operation can be provided

# Summary

Alfa Laval Service Kits Decanters

Alfa Laval offers kits for commissioning, upgrading, preventive maintenance, intermediate and major service.

Each kit contains all the necessary parts for a specific decanter and service event.

By using Alfa Laval Service Kits, customers receive:

- Quality
- Time
- Top performance
